SOURCES

of Supply for Pressure Treated Preservative and Fire Retardant Treated Wood

INTRODUCTION

The Western Wood Preservers Institute represents the pressure treated wood industry in western North America. WWPI provides educational information to assist consumers in the selection and proper, safe and environmentally appropriate use of treated wood products.

WWPI members are dedicated to providing quality products that meet all building and treating code standards while using only EPA registered preservatives. Always follow appropriate safety precautions available from your supplier.

For information on selection and use of treated wood products visit WWPIInstitute.org or call WWPI for additional help. Thank you again for choosing pressure treated wood products, the right choice to protect and extend the life of your investment, while conserving our precious forest resources.

ASSURANCE OF QUALITY

The American Lumber Standards Committee (ALSC) is responsible for the oversight and accreditation of third party inspection agencies for treated wood. In order to comply with all building codes, treated wood must be marked with the quality stamp or end tag of an accredited ALSC agency.

The IBC reads: "Wood required by Section 2304.11 to be preservative treated shall bear the quality mark of an inspection agency that maintains continuing supervision, testing and inspection over the quality of the preservative treated wood. Inspection agencies for preservative-treated wood shall be listed by an accreditation body* that complies with the requirements of the American Lumber Standards Treated Wood Program, or equivalent. The quality mark shall be on a stamp or label affixed to preservative-treated wood."

WWPI recognizes quality marks for treated wood are sometimes confusing

with much product information including proprietary brands, warranties, etc. To help clarify the situation, WWPI has implemented the CheckMark Identification Program to easily recognize and distinguish ALSC accredited agency's trademarks. Look for the CheckMark on the stamp or end-tag to quickly find the ALSC accredited agency's logo.

The industry also produces products that do not require ALSC oversight. Such products include landscape timbers for non-structural applications and decking products which carry their own manufacturer's warranty.

ENVIRONMENTAL CODE

Members of WWPI share the public concern for a sound economy, healthy environment and good stewardship of all natural resources. WWPI's Environmental Code focuses on: the production of high quality products; operating facilities in a manner which meets or exceeds applicable regulations; supporting research to develop consumer and environmentally friendly products and processes; support scientifically appropriate standards and regulations; and proper disposal including recycling and reuse.

BEST MANAGEMENT PRACTICES

The industry has developed additional guidelines (BMPs) for the production and use of treated wood products intended for use in aquatic or other sensitive environments. The BMPs are intended to minimize the potential for movement of preservatives into the environment. The program calls for third party certification provided in writing or by the presence of the BMP quality Mark. Visit WWPIInstitute.org for more information on project evaluation and specification of BMPS.

* Accreditation Body. An approved, third-party organization that is independent of the grading and inspection agencies, and the lumber mills, and that initially accredits and subsequently monitors, on a continuing basis, the competency and performance of a grading or inspection agency related to carrying out specific tasks.

PRESSURE TREATMENTS AVAILABLE

Waterborne Preservatives

- 1 = ACQ – Alkaline Copper Quat
 2 = ACZA – Ammoniacal Copper Zinc Arsenate
 3 = CA-B – Copper Azole
 4 = CCA – Chromated Copper Arsenate
 5 = Inorganic Boron or Disodium Octaborate Tetrathrydrate
 6 = Copper Naphthenate

Oil-type Preservatives

- 7 = Copper Naphthenate
 8 = Creosote & Creosote Petroleum Solutions
 9 = Pentachlorophenol
 10 = Solubilized Copper-8-Quinolinolate
 11 = IPBC – 3-IODO-2-Propynyl Butyl Carbamate

Fire Retardants

- 12 = Interior Type Fire Retardants
 13 = Exterior Type Fire Retardants
