

FINALLY. SOMETHING EASY TO UNDERSTAND ON TREATED WOOD.

Introducing the CheckMark™ Quality Assurance Identification Program for treated wood.

To meet the strict requirements of the Uniform Building Code, treated wood must be identified by the quality mark of an accredited American Lumber Standard Committee inspection agency. In the West, five agencies are authorized under the ALSC Treated Wood Program to inspect treated wood. Each agency

has their own unique mark and it often is located in different positions on the stamp or end-tag. It isn't easy for code officials, building materials dealers or contractors to recognize or find. But, not any longer.

Starting in 1999, to find the inspection agency's quality mark, simply look for the CheckMark. Whether the mark is on the stamp or the front or back of the tag, now it is easy to find.

JUST CHECK FOR IT.
